

# LS4 Weighbars

## Weighbars

The LS4 instrument shows only the weight (no data manipulation), but it can also give the following information: Number of animals weighed, total mass of all animals, average mass of all animals, maximum and minimum mass. If used in "fine mode" (up to 200 kg weight) it is accurate to 100 g. It is hand held, with rechargeable battery incorporated

The LS4 instrument connects to two loadbars (2000 kg capacity) and a digital readout instrument. The length of the load bars can be chosen as 600, 800 or 1000 mm. The LS4 is equipped with a stabilizing algorithm, which eliminates the spikes and oscillations in the measurements caused by very lively animals, and gives a stable reading.

We also supply a full range of crates and platforms, neck and body clamps, which can be bolted on top of the two load bars

### Features

- Large LCD Display
- 2x Weigh bars 600, 800 or 1000 mm
- Stabilizing Algorithm software
- Built In Battery

### Applications

- Animal Weighing
